**6 Presentation of the spill boundaries (flooded areas) in past floods**

It is very important and very useful for the further processing and assessment of the flood risk to know the size and boundaries of flooded areas in past flood events. Due to this fact, we ask you, if possible, to plot and present the boundaries of the flooded areas with maximum scope, or to present separately the spill boundaries for different past floods. To do this, you may choose different graphical presentation variants than those suggested in the table below. Please specify which graphical presentation option you have selected.

| date of the event<br>(day, month, year) | variants for graphical representation of spill (flooded territories) |                                                 |                                                             |                                                          |                          |
|-----------------------------------------|----------------------------------------------------------------------|-------------------------------------------------|-------------------------------------------------------------|----------------------------------------------------------|--------------------------|
